PROFILE

MSc student in Computer Science (Cybersecurity) at the University of Trento; bachelor's research thesis on LLM security (jailbreak detection). Trained in security testing and risk assessment; practising offensive security on Hack The Box. Seeking a **4–5 month curricular internship with Master's thesis** in Milan, from March 2027.

EDUCATION

University of Trento (UNITN) **Sep 2025 – Present**
Master of Science in Computer Science (Cybersecurity track) *Trento, Italy*
Relevant coursework: Introduction to Computer and Network Security (30/30 cum laude), Cyber Security Risk Assessment (30/30 cum laude), Security Testing (static and dynamic analysis); ongoing: Applied Cryptography, Privacy and IP Rights, Multimedia Data Security.

University of Milan-Bicocca **Oct 2022 – Jul 2025**
Bachelor of Science in Computer Science – Final Grade: 104/110 *Milan, Italy*

EXPERIENCE

Internship – Research Thesis Project (AI Security) **Mar 2025 – Jul 2025**
University of Milan-Bicocca – Department of Informatics (DISCo) *Milan, Italy*

- Designed and implemented an **automatic jailbreak detection system** for LLM responses, within an AI security research project on alignment and jailbreak resilience.
- Fine-tuned a **BERT-based classifier** on a curated dataset of 1,784 labeled instances, outperforming baseline models.
- Integrated **unsupervised clustering (K-means)**, validated with PCA, t-SNE and UMAP, in a containerized Python pipeline.

Assistant Technician (Part-time) **Jun 2021 – Oct 2021**
Pitek *Lecco, On-site*

- Supported IT infrastructure for client companies: server and network maintenance, on-site support.

PROJECTS

Cyber Security Risk Assessment – Simulated Bank (SecRAM 2.0) **AY 2025/26**
University of Trento (Cyber Security Risk Assessment Course) *Trento, On-site*

- End-to-end risk assessment of a simulated bank (NovaBanca S.p.A.) with **SecRAM 2.0** (EU SESAR methodology).
- Identified primary and supporting assets, CIA impact, threat scenarios, likelihood and risk levels.
- Selected controls and evaluated residual risk; delivered report, methodology notes and Excel risk register.

Dsh.C – A Simple Shell in C **Dec 2023 – Jan 2024**
Personal Project *Milan, Remote*

- Unix shell in C with path lookup, redirection (>, >>), piping (|) and POSIX process management.

CTF & HACKING

Hack The Box – Offensive Security Practice **Sep 2026 – Present**
Personal Project *Trento, Remote*

- HTB Academy fundamental modules and Starting Point machines, building towards the Penetration Tester path.

CyberChallenge.IT 2027 – CINI, preparing for the admission selection **2027**

SKILLS

Security: risk assessment (SecRAM 2.0), security testing, LLM security and jailbreak detection
Programming Languages: Python, C, Java, Kotlin, SQL, JavaScript, TypeScript, Bash
Systems & Technologies: Linux, Docker, Docker Compose, Git, REST APIs, Flask, MongoDB, Firebase
AI & Machine Learning: LLM evaluation, fine-tuning (BERT), clustering (K-means), PCA/t-SNE/UMAP
Languages: Italian (Native), English (C1)
